COMATEC ®

Microteam Oy

IoT Solutions
– Get it Right!

For us, IoT is a lot more than devices connected together – it is all about making things happen between people and devices. This is where new business is generated and the technology is truly working for us. **That's credible creativity.**

What is Your next IoT Solution?

Comatec knows IoT, combining electronic and software design into smarter machines and products.

We help you to create smart solutions from the specification to ready made products.

Using our IoT-platforms we ensure a short time-to-market and reliable development of your application.

We manage the whole project, including mechanical design of the enclosures and EMC compliance issues.

Smart Devices

Successful development of smart custom devices requires knowledge of the hardware, software and the framework of the application.
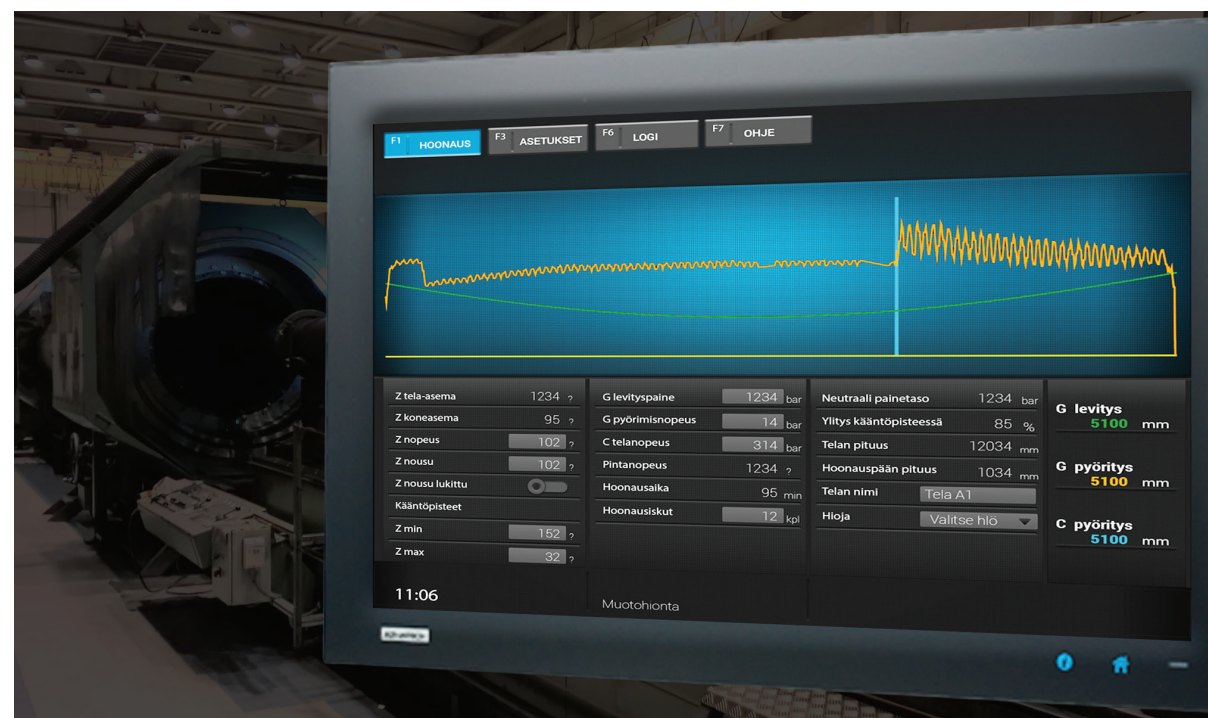

- Electronics
- Embedded software
- Cloud application
- AWS and Azure
- Enclosures
- Production
- Maintenance

Smart Vehicle

Interconnected vehicles enable efficient and quick management of fleets. Our intelligent ECUs and infotainment units provide a quick entry point into vehicle automation.

- Remote update
- Backwards compatibility
- Application design
- ISO 26262 consultancy
- Remote diagnostics
- Production tools
- Cable harness design

Smart Manufacturing

Efficient use of data in production requires deep understanding of the industry. Improve usability, performance and interconnectability by upgrading to Industry 4.0 with us.

- Process Modeling
- Smart machines
- Robotics
- MindSphere
- Sensors
- Industry 4.0
- UI & UX Design

COMATEC ®

Comatec Group, a leading engineering company with design, project management and expert services and employing over 600 professionals. Whether you need help with the idea of a new product, basic design, or project management, Group has expertise and additional skills to solve multiple industry challenges. In IoT product development services our special know-how is related to embedded systems, IoT solutions, industrial automation and vehicle engineering design and project services. In these areas, value added to customers is produced in particular through software and automation technology.

We are not only a traditional design house; we offer versatile IoT product development services and a process that considers all the phases. You will get everything you need, from the definition of goals to a finalised product – all under the same roof.
