BRAIN POWER FOR ENGINEERING

# EPCM Service Model

In EPCM projects Comatec has total responsibility for project coordination. We are responsible for the basic engineering and design, for tenders, contract negotiations, technical implementation and supervision for the total delivery. Commissioning and training are also included in the total delivery.

## Benefits of the EPCM model to the client are:

- Lower total costs – 10-20 % less than with the EPC model
- Better control over total project
- Clear areas of responsibility – potential problems are detected in time and corrective action can be taken at an early stage
- Flexibility for financing
- Possibility of using more local service providers

”

*I would recommend this form of cooperation to others.”*

Customer satisfaction survey, 2012

## EPCM in a nutshell

### The EPCM service model includes:

- Project management
- Engineering and design
- Resourcing
- Licensing
- Site supervision services during construction
