

Comatec SPM - Service for the creation of spare parts documentation

Spare parts are an important part of a productive business. Reliable, legible and up-to-date spare parts information is an important part of a product's image and usability. High-quality spare parts information makes spare parts sales faster and more efficient, reduces the number of incorrect deliveries, reduces the workload in customer service and improves customer satisfaction.

Diverse options for producing material

Technical documentation is Comatec's strong field of expertise. Our clients have access to a comprehensive range of technical documentation services.

Comatec SPM (Spare Parts Management) is a service specifically dedicated to the creation and management of spare parts catalogs, delivered by experienced professionals and implemented with high quality.

Comatec SPM includes different options for the production of spare parts catalogs. The service can be tailored to the client's needs.

Our service adapts to your needs

Our service is based on versatility and flexibility. We offer a turnkey solution where we produce content and publications from material supplied by the client. We can produce spare parts materials using the customer's own documentation tools. Optionally, we produce materials with our own professional Comatec P6 spare parts system.

Comatec P6 spare parts system

- Spare parts catalogs are produced and distributed with a single software
- Spare parts catalogs are read with a browser-based viewer or from a PDF
- Possible to extend the system to an online shop and complaints handling
- Operating and maintenance instructions can be included into the spare part catalog

Documentation experts

- Skilled professionals produce high-quality content with the chosen system

Other systems

- Catalog content can be delivered directly to the client's system in LDF format

Options and flexibility for implementation

- ✓ Source material for defining spare parts: SBOM, other technical documents or instructions
- ✓ Production of spare parts illustrations and spare parts lists using defined software
- ✓ Spare parts illustrations based on technical drawings or 3D models
- ✓ Multilingual parts list with required additional information
- ✓ Delivery options include PDF, an electronic spare parts catalog or a content package into the client's spare parts system
- ✓ Operation and maintenance instructions can be integrated into the electronic spare parts catalog
- ✓ Electronic spare parts catalog can be extended to an online shop
